

# WONDERS OF SCIENCE

“... bringing life to science”

WONDERS OF SCIENCE IS A MINISTRY OF WHITTIER CHRISTIAN SCHOOLS

## NORWALK COMMUNITY OUTREACH

We witnessed the Lord saving people every night all week long at Community Baptist Church, Norwalk.. We actually began the programs during the Sunday morning sermon hour to challenge the congregation to “let their light so shine to the neighborhood.” That program on light was the most appropriate for that morning.

"Two police chaplains (next to Dean) joined with the Norwalk pastor (right) for dinner before one of the programs."

Throughout the week, youth playing basketball in the parking lot decided to come in, local teachers attended and many others came who were invited by church members. A former science teacher brought her skeptical grandson who had many questions after the program, but was honestly open and listening throughout our ongoing discussion. The teachers who attended acknowledged their students in the audience to the student’s delight. The impact the Lord had will reverberate throughout the community for years to come.

Stutter machine is always good for a laugh.

## WONDERS OF SCIENCE GOING TO BOLIVA!

A Bolivian missionary happened to visit one of our recent programs held in Ottawa, IL and asked if we’d be able to come to his country to minister. I wouldn’t be able to take all my equipment across international borders due to current political unrest. However, he is hoping a scientist could introduce Special Creation to Bolivian university professors, teachers and also speak to students and youth groups.

This will be a tremendous opportunity to provide teaching on this critical subject to an area of the world that has not had the access to materials and seminars readily available in the USA. This is perhaps a once-in-a-lifetime opportunity, so, please pray for wise planning and for our necessary support.

May 1-5	Norwalk, California
June 15 - 16	Caranavi, Bolivia
June 18	La Paz, Bolivia
June 20 - 21	Cochabamba, Bolivia
June 23 - 24	Santa Cruz, Bolivia
July 10	Cincinnati, Ohio

## COMMENT CORNER...

*“My husband died 4 years ago and I haven’t been in a church since! The subjects of these programs make me realize how much I need to be here!”*

**-- First Time Visitor --**

*“We taught science, but not like this! Such good spiritual applications.”*

**-- Science Teacher --**

## What's All That White Fluffy Stuff On The Ground At Science Camp?

Readers of this newsletter living in the northern states will find it difficult to believe, but 75% of our WCS 7th Grade students have never experienced snow before! Can you imagine their excitement during the week of Science Camp in our local mountains? Constant snowball fights were the norm.

Our original camp location for the past six years had to close yet another nearby camp was kind enough to arrange for us to use their facility. The new site was at a higher altitude and known for major snow in early March. What an exciting time for our students.

Many different experiment activities were scheduled each day all week long. These activities included aircraft and rocket design and flight testing, air rifle safety, laser chess, building chaos towers, electric race cars, chemistry, radio controlled tanks and electronic design. Then there's recreation time, Bible journaling and wonderful meals. The evenings consisted of nightly Wonders of Science presentations and devotions. We witnessed many, many re-dedications to Jesus Christ and a number of students placed their faith in Jesus as Savior and Lord. What a thrilling week!

### BE INVOLVED!

- Thank you for your much needed support in these challenging times.
- Pray for traveling mercies as we head to Bolivia this summer.
- Pray for our hearts to be prepared to minister to others and for the Lord to create a receptive audience.

**Wonders of Science  
Counts on You!**

**PARENT'S/KIDS NIGHT OUT**

Many times a group interested in the unique approach of Wonders of Science considers itself too small to host such a program. I assure them that those supporting our ministry are just as excited about small groups as they are those when thousands attend. Many early century ministries dealt exclusively with smaller groups and the Lord blessed in amazing ways as He continues to do so now.

Whittier Christian Schools hosted a Parent's/Kids Night Out.

The teachers have fun learning new things!

**CALVARY CHRISTIAN SCHOOL, COSTA MESA**

Having been there last year, we had a request for a different type of program at this school. The chairperson of the science department requested two series devoted entirely to chemistry. I had not done anything like that before, but I actually had more fun I think, than the students, though they would deny it. The reaction in the student's faces was very evident as they saw first-hand the power that our Lord designed in chemistry.

After the programs, I took time for additional science instruction for the teachers through various experiments that they could present in the classroom.

**BIOLA UNIVERSITY**

WOS had the pleasure of speaking to an auditorium filled with professors, students and parents attending the annual ACSI Science Fair at Biola University. Many of the students present will become teachers and professionals in the future. What an amazing impact Wonders of Science has as we show the relationship that the God of the Universe has with His creation. Over and over again we hear comments from teachers as to how appreciative they were to attend and witness the integration of the Scripture with various disciplines of science and math. Many expressed their gratitude in being able to walk away with so many new ideas to try in the classroom and the effective way the Scripture was legitimately woven into each demonstration.

There was a full house at the Science Fair.

**LOCAL AREA ASSEMBLIES**

**Science Moment**

Job, have you considered the treasures in the snow? God asked Job if he could create rain, dew, ice, or frost (Job 38: 28, 29). Water is truly an amazing substance. A liquid raindrop when frozen is ice, gaseous water vapor when it sublimates is frost, and like dry ice, it can go back to a gas without passing through the liquid state. Water can float as a gas, flow as a liquid and freeze as a solid, which curiously, floats on water.

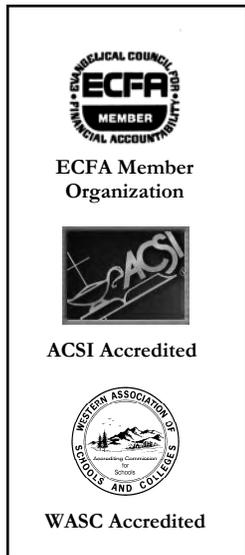

Most of earth's fresh water above ground is frozen and 90% of that almost completely covers the continent of Antarctica. If you cut Antarctica's ice sheet into cubic mile ice cubes you would have more than 6 million of them. If all that ice melted, the earth's oceans would rise 260 feet! But that won't happen! "God has set a boundary for the seas that they may not pass over and return to cover the earth." (Ps. 104:9) "Even the wind and the seas obey Him!" (Mark 4:41)

## RANDOM TRACT EVENTS!

**W**e recently received a report from an inmate who uses WOS materials for a prison Bible study. There was a group of inmates interested in learning more about why the study group expressed such joy and peace even while in prison. Feeling somewhat intimidated by the size and demeanor of many of these men (former hit men for gangs, drug pushers, etc.) he let them borrow some of his little “comic book” style Chick Tracts. Later a leader in a gang told him excitedly that this tract was just what he needed to find the true God of peace who could love someone as evil as he was. The man’s heart was softened and the Lord began another work in his life.

The young inmate said, “Wow, I guess nobody is beyond God’s ability to reach them with the truth. All I did was share a little booklet and look what God did!”

## AWANA IN BURBANK

**W**e look forward to any opportunity to minister to area AWANA youth programs. The Wonders of Science program was asked to visit the Burbank, CA area again to present an evening of science demos illustrating Scripture.

Nearly 900 youth and leaders jammed the activity center to participate in the many unusual science demos. Many enthusiastic volunteers waded in hopeful anticipation of being selected to help with the demonstration.

Leaders consistently commented on the impact the program had, not only on the youth, but on the leaders and parent volunteers as well. So many of the young people come from very challenging home lives and look forward to the love shown through their leaders and then attending an enjoyable learning experience that emphasizes the true source of that love.

A large AWANA group attended to program.
